

The RE-ENERGIZE Rag

Volume 12, May 2018

Congratulations to Queen Elizabeth Hospital Birmingham for setting the European record for most patients recruited in a month at **4 patients** in April! Keep it up!!

Thank you for continuing to enroll patients.

We could not have gotten this far without you!

FAQ: If the investigational product is clogging the dobhoffs, how can this be resolved?

If the study product is clogging the dobhoffs, check the following:

- Is enough water being used?
- Is the IP being mixed with 50mL of water per 5g package?
- Is the tube being flushed after administering the IP?
- Is there a delay in administering after the IP is mixed? If so, add more water to allow mixture to be easily administered.
